Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Heated and Chilled Ceilings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global sales of heated and cooled ceiling panels reached 7.21 million square meters, with an average selling price of $138 per square meter. Heated and cooled ceiling panels are heat and cooling terminal devices installed in indoor ceilings, primarily using radiation heat transfer, supplemented by convection heat transfer. They typically consist of metal panels with heat exchange pipes embedded within or attached to the back. Hot or cold water flows through the panels, raising or lowering their surface temperature. Heat is then exchanged with indoor air and objects through infrared radiation and some natural convection, achieving heating or cooling. The heated and cooled ceiling industry chain consists of three segments: upstream, midstream, and downstream. The upstream segment primarily provides metal sheets, gypsum boards, insulation materials, pipes, heating and cooling equipment, and intelligent control systems. The midstream segment comprises module manufacturers, system integrators, and construction companies, responsible for product manufacturing and installation. The downstream segment is used in buildings such as offices, commercial buildings, hospitals, schools, and residences, and involves operations, maintenance, and energy-saving retrofits.

The global Heated and Chilled Ceilings market size was estimated at USD 995.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
