## Abstracts

The heated nitrogen oxide analyzer is an instrument specially used to measure the concentration of nitrogen oxides (NO<sub>x</sub>) in the environment. Its core principle is based on the chemiluminescence detection technology. It converts nitrogen dioxide (NO<sub>2</sub>) into nitric oxide (NO) by heating the conversion chamber, and then uses NO to react with ozone (O<sub>3</sub>) to produce chemiluminescence. The concentration of NO is determined by measuring the luminescence intensity, and then the concentration of NO<sub>x</sub> is calculated. As the world pays more and more attention to environmental protection and air quality, the market demand for nitrogen oxide monitors continues to increase, and the market size continues to grow. The market size and development speed vary in different regions. For example, the market size in developed regions such as North America and Europe is large and growing steadily; while emerging markets such as Asia and South America have great growth potential.

The global Heated NO<sub>x</sub> Analyzer market size was estimated at USD 421.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.30% during the forecast period.
