Abstracts

Heavy duty autonomous trucks are self-driving commercial vehicles designed for long-haul freight transport, utilizing a combination of sensors (such as LiDAR, radar, and cameras), artificial intelligence, and advanced software to navigate highways and interstates without human intervention, though they may still operate with remote monitoring or require human drivers for complex urban maneuvers or last-mile delivery. These vehicles are engineered to improve safety, reduce operational costs (including fuel consumption and labor expenses), enhance logistics efficiency, and address driver shortages in the trucking industry, with automation levels typically ranging from Level 4 (high automation in defined conditions) to Level 5 (full automation under all conditions) as defined by SAE International.
