Report Overview

Heavy duty casters are specialized wheels designed to support substantial loads, often exceeding 1,000 pounds per caster, making them essential for industrial, commercial, and military applications where durability and high weight capacity are critical. These casters are typically constructed from robust materials such as forged steel, polyurethane, or rubber, with features like precision ball bearings, reinforced cores, and swivel or rigid mounting options to ensure smooth movement under heavy loads. They are commonly used in manufacturing plants, warehouses, aerospace, healthcare (for heavy medical equipment), and transportation sectors, where equipment, machinery, or large containers require mobility without compromising stability. The market is driven by increasing automation in logistics, growth in e-commerce and warehousing, and the need for efficient material handling solutions.
