Abstracts

Heavy duty flux remover is a specialized chemical solvent designed for the thorough removal of aggressive, stubborn, and high-solid flux residues?such as those from rosin-based or no-clean fluxes?that remain on printed circuit boards (PCBs) and other electronic assemblies after soldering processes. These formulations are engineered to dissolve difficult-to-remove ionic and non-ionic contaminants without damaging sensitive components, substrates, or coatings, and they often feature low residue evaporation, high solvency power, and compatibility with various industrial cleaning methods, including immersion, spray-in-air, or ultrasonic systems. The product is distinguished from general-purpose cleaners by its ability to address challenging residues that can lead to electrochemical migration, corrosion, or electrical failures if not completely eliminated, making it a critical consumable in electronics manufacturing, aerospace, military, and telecommunications sectors where reliability and performance standards are stringent.

The global Heavy Duty Flux Remover market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
