### Report Overview

The wiper motor incorporates a simple brush driven engine that is linked to a worm gear to help convert the energy produced into usable power. The wiper motor is driven by a motor, which converts the rotational motion of the motor into the reciprocating motion of the wiper arm through a linkage mechanism, thus achieving the wiper action. Generally, by turning on the motor, the wiper can work. By selecting a high and low speed range, the current of the motor can be changed to control the motor speed and thus the wiper arm speed.
