Report Overview

A heavy mortiser is a specialized woodworking machine used to create square or rectangular holes in wood for mortise and tenon joints. It is typically used in furniture making, cabinetry, and other woodworking applications where strong and durable joints are required. The heavy mortiser consists of a sturdy base, a vertical column, a motorized drill bit or chisel, and a worktable where the wood is positioned for cutting. This machine is designed to handle larger and more complex woodworking projects compared to handheld mortising tools, making it a valuable asset for professional woodworkers and manufacturers.

The market for heavy mortisers is experiencing steady growth driven by several key factors.
