## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Heavy Payload Industrial Robot competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Industrial robots are programmable, multi-degree-of-freedom, autonomous manipulators that perform repetitive tasks in industrial automation environments, such as handling, welding, assembly, and painting. Based on the product types of industrial robots manufactured by various manufacturers, this article defines heavy-payload industrial robots as those with a payload capacity of 200 kg or more, specifically designed for high-load operations such as handling large and heavy workpieces, welding, and loading and unloading. With the advancement of intelligent manufacturing, heavy-payload industrial robots are becoming a key tool for many heavy industrial enterprises to achieve efficiency and safety upgrades. Compared to traditional manual labor or lifting equipment, heavy-payload robots offer advantages such as high payload, high precision, and high stability. They can continuously perform heavy tasks such as handling, welding, and loading and unloading, effectively reducing human errors and production interruptions, significantly improving production line continuity and operational efficiency. In applications such as automotive die-casting, steel forging, and wind turbine assembly, heavy-payload robots not only reduce raw material loss and product damage, but also optimize human resource allocation through intelligent collaboration and flexible deployment, freeing up more high-value-added positions. Technavio market research indicates that the future demand for "continuous production" and "cost reduction and efficiency improvement" will continue to drive the expansion of the global heavy-payload industrial robot market, making it an indispensable support for the development of industrial automation.

The global Heavy Payload Industrial Robot market size was estimated at USD 2945.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
