Report Overview

This report studies the Heavy Rail market. Rail is the most important component of rail track system. The train will run on the parallel rails, carrying passengers and freight. Fixed on the sleepers, rails pass the load of trains to sleepers.

Rails generally described and specified by their weight per unit length. The minimum weight per meter of rail required depends on the maximum axle load of the trains that will run on the track. Generally, the heavier the rails and the rest of the track work, the heavier and faster the trains these tracks can carry.
