Report Overview:

The hydraulic retarder of a truck reduces the speed of the vehicle through a hydraulic device. It is generally composed of a retarder body, a control device, an electronic control unit and other components. In the structure of the retarder body, the rotor and the stator together form a working chamber. When the force retarder works, the electronic control system controls the proportional valve to apply air pressure to the working fluid to fill the working chamber with the oil.
