## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hectorite Organoclay competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hectorite organoclay is an organically treated montmorillonite clay. It is an oleophilic material. By replacing the natural cations between the montmorillonite interlayers with organic cations, it achieves improved dispersibility and compatibility with organic materials. This modification improves rheological properties, enhances suspension properties, and controls fluid loss in various applications, such as oilfield drilling fluids, coatings, and inks. Global production in 2024 was estimated to be approximately 42,700 tons, with an average selling price of US\$7,530 per ton.

The global Hectorite Organoclay market size was estimated at USD 322.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
