Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HEK293 Cell Line competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global HEK293 cell line production reached 215,000 vials, with an average selling price of US\$716 per vial. The HEK293 cell line is an immortalized cell line derived from human embryonic kidney (HEK) cells. Originally derived through adenovirus type 5 (Ad5) transduction, it is easy to culture, has high transfection efficiency, and is highly compatible with exogenous gene expression. It is widely used in recombinant protein and monoclonal antibody production, adenoviral and lentiviral vector preparation, gene therapy product development, vaccine development, drug screening, and toxicity testing. The "293" designation indicates that the cell line was derived in the 293rd experiment. Globally, with the rapid development of biotechnology, demand for HEK293 cells in the biopharmaceutical industry has steadily increased. Market participants include ATCC, Thermo Fisher Scientific, and Sigma-Aldrich. The surge in demand for viral vector vaccines and gene therapies following the COVID-19 pandemic has driven the use of HEK293 cells, and market demand is expected to continue to grow. Furthermore, with the global biopharmaceutical industry's increasing emphasis on personalized medicine, gene therapy, and cell therapy, HEK293 cells also have significant potential for application in these areas.

The global HEK293 Cell Line market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
