## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Helical Tomotherapy System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Helical Tomotherapy System production reached approximately 120 units, with an average global market price of around US\$1.28 million per unit. The gross profit margin of major companies in the industry is between 38%?52%. Annual production capacity varied from 60 to 180 units. Helical tomotherapy systems are advanced radiation therapy devices that combine intensity-modulated radiation therapy (IMRT) with CT imaging in a continuous helical treatment mode. They deliver precise, image-guided radiation for cancer treatment, enabling high conformity, reduced toxicity, and adaptive radiotherapy. Upstream: Linear accelerators, multileaf collimators (MLC), precision motors, high-density shielding materials, medical-grade imaging detectors, treatment planning systems (TPS) software. Midstream: Radiotherapy system integrators such as Accuray (Tomotherapy), Varian, Elekta; manufacturing includes system assembly, imaging integration, QA calibration and software integration. Downstream: Oncology centers, cancer hospitals, radiotherapy departments, private clinics. End customers emphasize treatment accuracy, system uptime, imaging quality, adaptive radiotherapy capability, and total lifecycle maintenance. The helical tomotherapy market is expanding as cancer incidence increases and healthcare systems invest in advanced precision radiotherapy. Its integrated CT imaging and helical IMRT delivery offer superior dose conformity, making it suitable for complex tumors and re-irradiation cases. Growing adoption of adaptive radiotherapy and AI-based treatment planning further strengthens demand. Although high acquisition costs limit adoption in low-income regions, developed markets continue upgrading older radiotherapy units with tomotherapy platforms. As hospitals pursue

higher treatment accuracy and reduced toxicity, the helical tomotherapy system is expected to maintain stable long-term growth.

The global Helical Tomotherapy System market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
