### Report Overview

A helicopter is a type of rotorcraft in which lift and thrust are supplied by rotors. This allows the helicopter to take off and land vertically, to hover, and to fly forward, backward, and laterally. These attributes allow helicopters to be used in congested or isolated areas where fixed-wing aircraft and many forms of VTOL (vertical takeoff and landing) aircraft cannot perform.

The increasing demand for medium helicopters, shift towards civil helicopters market, growing joint ventures between global manufacturers, increased demand for technologically advanced combat helicopters, increasing up-gradation of existing fleet, tie-up between helicopters manufacturers and aviation colleges are the key growth drivers for the global helicopter market.
