## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Helium for Welding competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Helium for Welding refers to the application of helium gas as a shielding or inert gas in welding processes, particularly in gas tungsten arc welding (GTAW/TIG) and gas metal arc welding (GMAW/MIG). Its high thermal conductivity and inert properties prevent oxidation and contamination of the weld pool, ensuring cleaner, stronger joints in materials like aluminum, stainless steel, and high-temperature alloys. Helium is often mixed with argon to enhance arc stability and penetration depth, making it ideal for thick materials or high-speed welding in aerospace, automotive, and precision manufacturing. Its ability to produce deep, narrow welds with reduced spatter is critical for applications requiring structural integrity and high-quality finishes.

The global Helium for Welding market size was estimated at USD 1424.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
