## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Helium Liquefaction Units competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Helium Liquefaction Units are specialized cryogenic systems designed to convert gaseous helium into liquid helium by cooling it to extremely low temperatures ? typically around 4.2 K (?269 ?C) ? near absolute zero. These units are essential in recovering, purifying, and reliquefying helium for reuse, helping reduce the high cost and scarcity of this noble gas. In 2024, global Helium Liquefaction Units production reached approximately 1461 units, with an average global market price of around US\$ 60 K USD per unit. The production capacity for Helium Liquefaction Units in 2024 was approximately 1552 units. The typical gross profit margin for Helium Liquefaction Units is between 30% and 40%. The Helium Liquefaction Units industry operates within a specialized value chain that integrates advanced cryogenic technology. Upstream, it depends on helium gas sources extracted from natural gas fields or byproduct recovery from industrial processes, as well as suppliers of compressors, cryocoolers, and cryogenic heat exchangers. Midstream, the liquefaction units convert gaseous helium into liquid form using low-temperature refrigeration systems, ensuring high purity and efficient energy use. Downstream, liquid helium is distributed to industries such as aerospace, medical imaging (MRI), semiconductor manufacturing, superconducting research, and cryogenics, where it is used for cooling and preservation. Overall, the helium liquefaction value chain connects helium extraction, purification, liquefaction, and end-use applications, forming a tightly integrated industrial ecosystem.

The global Helium Liquefaction Units market size was estimated at USD 87.66 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10%

during the forecast period.
