Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hemoderivative competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Hemoderivatives, also known as blood-derived products, are therapeutic or diagnostic substances obtained from human or animal blood, primarily from plasma. Through industrial-scale fractionation, valuable proteins such as albumin, immunoglobulins, and coagulation factors are isolated for clinical use. These products are essential in treating a variety of conditions, including immune deficiencies, hemophilia, and surgical bleeding. Due to their biological origin, hemoderivatives are subject to strict regulations to ensure viral safety, traceability, and consistent quality. They play a vital role in modern medicine, especially in intensive care, transfusion therapy, and rare disease management.The Human Bloodm Albumin market is driven by the increasing prevalence of liver diseases, nephrotic syndrome, and hypoalbuminemia, which require albumin-based therapies. Additionally, Human Bloodm Albumin is widely used in critical care settings for treating burns, shock, and surgical recovery, boosting its demand. The expanding applications of albumin in biopharmaceuticals, including drug delivery, vaccine formulation, and regenerative medicine, further fuel market growth. Rising healthcare expenditures, improvements in plasma collection infrastructure, and growing demand in emerging markets like China and India contribute to the industry's expansion.However, the market faces challenges such as limited plasma supply and high production costs, as Human Bloodm Albumin is primarily derived from human plasma, which is subject to stringent donation regulations. Stringent government policies and safety concerns regarding pathogen transmission also hinder market growth. Additionally, competition from synthetic and recombinant Human Bloodm Albumin is increasing, though high production costs and market
