Report Overview

Hemoglobin feed is a specialized animal feed ingredient derived from blood meal or hemoglobin powder, primarily sourced from slaughterhouse by-products. It serves as a high-protein supplement rich in essential amino acids, particularly lysine and methionine, making it valuable in livestock, poultry, and aquaculture diets. The product enhances feed efficiency, promotes growth, and improves animal health due to its high bioavailability and iron content. Its use is particularly prominent in regions with stringent protein supplementation needs or where alternative protein sources are cost-prohibitive. The market for hemoglobin feed is influenced by factors such as the expansion of the meat processing industry, rising demand for high-quality animal protein, and sustainability trends promoting the utilization of by-products. However, regulatory restrictions on blood-derived products in certain regions and competition from plant-based or synthetic alternatives may pose challenges. Growth potential lies in emerging markets with expanding livestock production and increasing awareness of sustainable feed solutions.

The global Hemoglobin Feed market size was estimated at USD 300.78 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
