### Report Overview:

Hemostasis is defined as 'the blocking of bleeding or bleeding through blood vessels or other parts of the body'. Hemostatic agents and tissue adhesives are used as an adjunct or alternative to standard suture techniques to control bleeding or wound closure. The industry is driven by a growing base of older people and an increase in the prevalence of chronic diseases. More than 45 percent of Americans have at least one chronic condition that requires intensive care, according to the CDC.
