Abstracts

Hemp insulation panels are building materials made from the fibrous stalks of industrial hemp plants, processed and bonded with natural or synthetic agents to form rigid or semi-rigid boards used for thermal and acoustic insulation in construction applications such as walls, roofs, and floors. These panels are valued for their sustainability credentials, as hemp is a rapidly renewable resource that sequesters carbon during growth, and the resulting product is often biodegradable, non-toxic, and possesses natural resistance to mold, pests, and fire when treated appropriately. Functionally, they offer competitive thermal performance, moisture regulation, and sound absorption, positioning them as an eco-friendly alternative to conventional insulation materials like fiberglass, mineral wool, or foam boards.

The global Hemp Insulation Panels market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
