Report Overview

A HeNe dual frequency laser, also known as a dual-mode or dual-wavelength laser, is a type of Helium-Neon (HeNe) laser that emits two closely spaced, coherent laser beams at different frequencies or wavelengths. The dual frequency operation is achieved by creating two neighboring lasing modes within the laser cavity. In a HeNe dual frequency laser, the laser tube contains a mix of helium and neon gas, along with a high-voltage discharge that excites the gas atoms. The excited helium atoms transfer their energy to the neon atoms, causing population inversion and stimulated emission of photons. HeNe dual frequency lasers have several practical applications. They are used in interferometry, metrology, precision measurements, optical coherence tomography (OCT), holography, and other areas where stable, coherent light sources with known frequency separation are required.

This report provides a deep insight into the global HeNe Dual Frequency Laser market covering all its essential aspects.
