## Abstracts

Heparin Anti-thrombogenic Coating is a specialized surface treatment applied to medical devices to reduce the risk of blood clot formation (thrombosis) during their use. By immobilizing heparin, a naturally occurring anticoagulant, onto device surfaces, this coating inhibits platelet activation and coagulation pathways, ensuring blood compatibility. It is commonly used on devices such as catheters, stents, heart valves, and extracorporeal circuits, enhancing their safety and functionality, particularly during prolonged contact with blood. This technology is critical in minimizing complications associated with medical implants and interventions in cardiovascular and other blood-contacting applications.

The global Heparin Anti-thrombogenic Coating market size was estimated at USD 897.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
