Abstracts

Hepatic antiviral drugs represent a specialized class of pharmaceuticals designed to treat viral infections that primarily target the liver, with a primary focus on chronic hepatitis B (HBV) and hepatitis C (HCV). These therapeutics function through mechanisms such as inhibiting viral replication, modulating the host immune response, or disrupting viral entry into hepatocytes, and they are categorized into nucleos(t)ide analogs, interferons, direct-acting antivirals (DAAs), and emerging RNA-targeted therapies. The market is characterized by its critical role in reducing liver-related morbidity?including cirrhosis, hepatocellular carcinoma, and liver failure?and is driven by global disease burden, advancements in treatment efficacy and tolerability, and increasing screening and diagnosis rates, though it faces challenges such as high treatment costs, drug resistance, and access disparities in low-income regions.

The global Hepatic Antiviral Drug market size was estimated at USD 3972.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
