Abstracts

The market for Hepatitis C treatment drugs encompasses a range of antiviral pharmaceutical products designed to cure chronic Hepatitis C virus (HCV) infection, a leading cause of liver cirrhosis and hepatocellular carcinoma. These treatments have evolved significantly from interferon-based therapies, which were often poorly tolerated and had limited efficacy, to direct-acting antivirals (DAAs) that target specific viral proteins, resulting in high cure rates?often exceeding 95%?with shorter treatment durations and fewer side effects. Key drug classes include NS3/4A protease inhibitors, NS5A inhibitors, and NS5B polymerase inhibitors, frequently used in combination regimens. The market is driven by factors such as the global burden of HCV infection, increasing screening and diagnosis rates, advancements in treatment guidelines recommending pan-genotypic therapies, and growing accessibility through government initiatives and generic manufacturing in developing regions. However, pricing pressures, patent expirations, and the gradual decline in prevalent cases due to successful treatment campaigns pose challenges to sustained market growth.

The global Hepatitis C Treatment Drug market size was estimated at USD 18.55 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.50% during the forecast period.
