## Abstracts

HEPES (4-(2-hydroxyethyl)-1-piperazineethanesulfonic acid) is a zwitterionic sulfonic acid buffering agent; one of the twenty Good's buffers. HEPES is widely used in cell culture, largely because it is better at maintaining physiological pH despite changes in carbon dioxide concentration (produced by aerobic respiration) when compared to bicarbonate buffers, which are also commonly used in cell culture. Global 5 largest manufacturers of HEPES are Merck, Suzhou Yacoo, Hopax, Avantor and ITW Reagents, which make up nearly 40%. Among them, Merck dominates with nearly 10% production value share, followed by Suzhou Yacoo (9%) and Hopax (8%). Top manufacturers are based in North America, China and Europe. North America is the largest market, holding a share over 40%, followed by China and Europe, with shares 20% and 22% separately. Based on the product type, the HEPES is primarily split into HEPES Powder and HEPES Solution. The leading type is HEPES Powder, with a market share over 75%. Based on the Application, the HEPES is primarily split into Cell Culture and IVD Reagents. The largest segment is Cell Culture, accounting for over 50%.

The global HEPES market size was estimated at USD 72.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
