### Report Overview

Hernia is a type of disease in which the inner layers of abdominal muscles become weak, and the lining of abdomen bulges out into a small sac. It can affect multiple areas such as navel (umbilical hernia), groin (inguinal hernia), or incision site of surgery (post-surgery hernia). Watchful waiting and surgical procedures are the two measures by which hernia can be treated. The surgical procedures consist of two methods such as open tension-free repair surgery and laparoscopy. These surgeries are performed using mesh which are made up of synthetic material or biological material with the help of fixation devices. Fixation devices are further segmented into tack and other fixation devices, where the tack segment is further sub-segmented into absorbable tack and non-absorbable tack.

The global Hernia Repair Fixation Devices market size was estimated at USD 1669 million in 2023 and is projected to reach USD 2355.03 million by 2032, exhibiting a CAGR of 3.90% during the forecast period.
