Abstracts

Hernia is a type of disease in which the inner layers of abdominal muscles become weak, and the lining of abdomen bulges out into a small sac. It can affect multiple areas such as navel (umbilical hernia), groin (inguinal hernia), or incision site of surgery (post-surgery hernia). Watchful waiting and surgical procedures are the two measures by which hernia can be treated. The surgical procedures consist of two methods such as open tension-free repair surgery and laparoscopy. These surgeries are performed using mesh which are made up of synthetic material or biological material with the help of fixation devices. Fixation devices are further segmented into tack and other fixation devices, where the tack segment is further sub-segmented into absorbable tack and non-absorbable tack. Every year, about 20 million inguinal hernia repair surgeries are performed across the world. In the U.S., around 150 thousand incisional hernia repair surgeries are performed yearly. The major factors that contribute toward the growth of the hernia repair consumables market include high adoption rate of tension-free hernia repair surgical procedures, increase in demand for advanced mesh, rising adoption of robotic surgeries, and high prevalence rate of hernia across the world. However, high cost of hernia repair procedures and unfavorable reimbursement policies would hamper the market growth in the near future. On the contrary, the development of novel hernia products including biological mesh as well as high market potential in developing countries are expected to provide lucrative growth opportunities for the market.

The global Hernia Repair Fixation Devices market size was estimated at USD 1739.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
