Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Heterocyclic Rubber Antioxidants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Heterocyclic rubber antioxidants are primarily used to prevent thermal and oxidative aging of rubber materials and offer effective protection against copper-induced degradation. These antioxidants are commonly applied in light-colored and transparent rubber products, as well as in foam latex applications. Key commercial products in this category include 2-mercaptobenzimidazole (MB), 2-mercaptomethylbenzimidazole (MMB), zinc salt of 2-mercaptobenzimidazole (MBZ), zinc salt of 2-mercaptomethylbenzimidazole (MMBZ), and various benzothiazole derivatives. Among them, MB and MBZ are the most widely used. Although MB is non-toxic, it has a distinct bitter taste, making it unsuitable for rubber items that come into contact with food, such as sanitary gloves or food container seals.

The global Heterocyclic Rubber Antioxidants market size was estimated at USD 195.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
