## Abstracts

Heterojunction (HJT) modules are a type of high-efficiency solar photovoltaic module that combines crystalline silicon wafers with thin-film amorphous silicon layers, leveraging the advantages of both technologies to achieve superior energy conversion efficiency, lower temperature coefficients, and enhanced bifaciality. This design minimizes carrier recombination and energy loss, resulting in higher power output per unit area compared to conventional PERC or TOPCon modules, while also offering better performance in low-light conditions and over a wider temperature range, making them particularly suitable for applications where space is limited or energy yield optimization is critical.

The global Heterojunction Modules market size was estimated at USD 30500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.50% during the forecast period.
