Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HEV Light Sunscreen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global HEV Light Sunscreen production reached 4,994.5 kiloliters, with an average selling price of US\$326.2 per liter. The upstream raw materials for HEV Light Sunscreen are primarily physical sunscreens, including zinc oxide and titanium dioxide. The market is relatively concentrated, with major players including BASF, Symrise, DSM, Cosmos, and Meifeng Chemical. Blue light is part of the visible spectrum. It is a type of high-energy visible light (HEV) visible to the human eye. Exposure to blue light occurs when using a variety of devices, but is most common from mobile phones, tablets, computers, televisions, LED devices, and fluorescent lamps. Studies have shown that the impact of blue light is greater than that of UVA rays. HEV Light Sunscreen is a sunscreen designed to address the dual damaging effects of blue light (wavelength 380-500nm) from electronic screens and ultraviolet rays (UVA/UVB). HEV Light Sunscreen often contains iron oxide and zinc oxide for physical protection and antioxidants and hyaluronic acid for repair. The core of anti-blue light sunscreen lies in its full-spectrum protection technology. By adding antioxidant ingredients (such as ferulic acid and Buddleja alpina extract) and physical shielding agents, it blocks ultraviolet (UVA/UVB) rays and high-energy blue light (400-450nm). Blue light has strong penetrating power and can penetrate directly into the dermis, causing DNA oxidative damage, collagen loss, and wrinkle formation. Consumer awareness is evolving: from skepticism to diversified demand. Early consumers doubted the effectiveness of anti-blue light protection, viewing it as a "tax on IQ." However, market education has achieved significant results by 2025: Scenarios of penetration: Students and office workers are exposed to screens for over eight hours a day, spurring a surge

in demand for blue light protection.

The global HEV Light Sunscreen market size was estimated at USD 1628.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
