Abstracts

Hexafluoroisopropyl sulfonic acid resin is named because its molecular structure contains sixteen fluorine atoms, isopropyl and sulfonic acid groups. This resin is usually made by a specific synthesis method and has high stability and unique chemical properties. Due to the strong electronegativity and high bond energy of fluorine atoms, hexafluoroisopropyl sulfonic acid resin has extremely strong chemical corrosion resistance and can withstand the erosion of a variety of strong acids, strong bases and organic solvents. The resin has high thermal stability and can maintain the stability of its physical and chemical properties at high temperatures, making it suitable for applications in various high temperature environments. Hexafluoroisopropyl sulfonic acid resin has excellent electrical insulation properties and low dielectric constant, making it an ideal material in the electrical and electronic fields. Due to the presence of fluorine atoms, the resin exhibits good hydrophobicity and can effectively prevent the penetration and erosion of moisture and other polar substances.

The global Hexafluoroisopropyl Sulfonic Acid Resin market size was estimated at USD 370.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
