Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on HF and UHF RFID Etched Antennas competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of HF and UHF RFID Etched Antennas will reach 75 billion pieces, with an average selling price of US\$0.021 per piece. RFID ultra-high frequency etched antennas operate at frequencies between 860MHz and 960MHz, offering a long read range of up to 10 meters. Definitions of this frequency vary globally: Europe and parts of Asia define it as 865-868MHz, North America as 902-928MHz, and China uses 920-925MHz. They are widely used in footwear and apparel retail, logistics management, warehouse management, and production line automation. RFID high-frequency etched antennas operate at a frequency of 13.56MHz, offering a short range, low price, and excellent confidentiality. They are widely used in bus cards, access cards, driver's licenses, passports, and more. The downstream industry chain for etched RFID antennas encompasses various end-user applications. These applications primarily focus on ultra-high frequency (UHF) RFID technology, with terminals primarily used in footwear and apparel, supermarket retail, library and archives, and logistics, primarily in footwear and apparel and commerce. These include brands like Walmart, ZARA, Uniqlo, Decathlon, and Nike. Applications in the logistics industry include Cainiao Logistics and China Postal Express & Logistics.

The global HF and UHF RFID Etched Antennas market size was estimated at USD 1575.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
