### Report Overview

HID inductive ballasts are high-pressure gas discharge lamp inductive ballasts, such as mercury lamps, sodium lamps, metal halide lamps, and xenon lamps. The HID inductive ballast is an iron-core inductive coil. The nature of the inductance is that when the current in the coil changes, the magnetic flux will change in the coil, thereby generating an induced electromotive force whose direction is opposite to the direction of the current, so it hinders the current change, so as to limit and stabilize the current.
