Report Overview:

High accuracy rotary encoder is an encoder with high resolution. Encoder resolution is the number of angular increments or what is called the measuring steps in one revolution (mechanical rotations) of the encoder shaft. This resolution is measured most commonly in pulses per revolution or PPR. PPR is used for incremental encoders and digital words are used for absolute encoders. Each encoder pulse represents the smallest angular step the encoder can measure. To put it simply, it is the granularity with which the encoder monitors the shaft rotation. Rotary encoders are available in different resolutions and usually, high-resolution rotary encoders can improve the accuracy of the system as a whole.

The Global High Accuracy Rotary Encoder Market Size was estimated at USD 1451.01 million in 2023 and is projected to reach USD 2093.49 million by 2029, exhibiting a CAGR of 6.30% during the forecast period.
