Abstracts

An electromagnetic pulse is a sudden burst of electromagnetic energy that radiates through the air close to speed of light. High-altitude Electro-Magnetic Pulses (HEMP) generated from both natural and intentional sources can cause disturbance and damage to ground based electrical systems, aircraft, and vehicles. HEMP (High altitude Electromagnetic Pulse) filters are designed to protect specific electrical assemblies, or sub-assemblies from HEMP Pulses. The EMP/HEMP filters protect electronics equipment by absorbing the potentially destructive EMP voltage and current within the filter before it reaches the electronic devices. Without protection from this harmful EMI, damage and disruption to system operability can be catastrophic, causing not only loss of data, security, connectivity or even loss of life. The High-altitude Electromagnetic Pulse Filters market covers Single Phase, Three Phase, etc. The typical players include API Technologies, ETS-Lindgren, MPE, European EMC Products, Captor Corporation, Meteolabor, Holland Shielding Systems, MTK Electronics, etc.
