Abstracts

The traditional trap light source with low irradiation distance can not satisfy the monitoring of migratory pests. Therefore, people have developed a higher altitude of exposure to insects detection lights. The device uses 400W-1000W searchlight as a light source to lure insects, and can reach an irradiation height of 500 meters, which can monitor and warn migrating pests. The whole process is unattended, and it can automatically complete the work of attracting insects, killing insects, taking photos and uploading.
