## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Aluminosilicate Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of high-aluminosilicate glass reached 41,978 tons, with an average selling price of \$18,370.37 per ton. High-aluminosilicate glass is primarily composed of aluminum oxide (Al<sub>2</sub>O<sub>3</sub>), silicon dioxide (SiO<sub>2</sub>), and alkaline oxides (such as sodium). To achieve high strength, a process called chemical strengthening is used to create a compressive layer on the glass surface. Chemically strengthened aluminosilicate glass is renowned for its high strength and durability, with excellent scratch and impact resistance. It is primarily used in cover glass for smartphones, tablets, and automotive displays. The high-aluminosilicate glass business has a fast revenue growth rate and is characterized by high customer concentration. In addition, the high-aluminosilicate glass business has a high but unstable gross profit margin. The price of aluminosilicate glass is closely related to the price of raw material lithium carbonate, and R&D expenditure is high. Upstream manufacturers of aluminosilicate glass have the characteristics of higher gross profit margins, while midstream manufacturers, such as aluminosilicate cover glass, have the characteristics of larger revenue scales. The iPhone 12 was first equipped with Corning's super-ceramic cover glass in 2020. Since then, Chinese brands such as Huawei and Honor have successively installed lithium aluminosilicate (LAS) glass on high-end models, and continuous upgrades and iterations in recent years have continuously enhanced the performance of glass cover plates.

The global High Aluminosilicate Glass market size was estimated at USD 771.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.90%

during the forecast period.
