## Abstracts

High Beam Assist (HBA) is an advanced automotive safety feature that automatically controls a vehicle's headlights to optimize visibility without causing glare to oncoming drivers. HBA uses sensors, cameras, or other detection systems to monitor the road ahead and the presence of other vehicles. When it detects an oncoming vehicle or a vehicle ahead in the same lane, it automatically switches from high beam to low beam headlights to prevent blinding other drivers. Once the road is clear, HBA switches back to high beams to provide maximum illumination. HBA is a part of the larger field of adaptive lighting systems, which enhance driving safety by adjusting the direction and intensity of vehicle headlights based on driving conditions. The High Beam Assist market is experiencing significant growth due to increasing emphasis on vehicle safety and advancements in automotive technology. As driver safety remains a top priority for both manufacturers and consumers, HBA systems have gained popularity in various vehicle segments.

The global High Beam Assist market size was estimated at USD 4061.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
