Report Overview

High-capacity coating die is a high-precision coating method, which is not only used for coating roll substrates such as electronic structures, optical films, and battery plates, but also for discontinuous substrates such as LCD glass substrates. resist coating. Its operating principle is to pump a certain amount of fluid into a mold that can spread the fluid evenly. As a precise wet coating technology, the working principle of the slot coating die is that the coating liquid is extruded and sprayed along the gap of the coating die under a certain pressure and a certain flow rate, and then transferred to the substrate. High volume coating dies can produce very thin coatings as well as clear optical coatings while keeping coat weights within very precise tolerances.
