Abstracts

A high-definition fluorescence navigation endoscope is an advanced medical imaging device that combines high-definition video endoscopy with fluorescence imaging technology to provide enhanced visualization during minimally invasive surgeries. This system uses fluorescent dyes or agents that emit light when exposed to specific wavelengths, allowing surgeons to clearly identify and visualize tissues, blood vessels, tumors, and other critical structures in real-time with high contrast and precision. The high-definition capabilities of the system significantly improve the clarity and accuracy of the images, making it easier for surgeons to navigate through complex surgical procedures and ensure the complete removal of diseased tissue while preserving healthy structures. It is widely used in fields such as oncology, gastrointestinal, and urological surgeries.
