Report Overview

High-density MDO-PE films refer to a film made of high-density polyethylene (HDPE) and processed by MDO (Machine Direction Orientation). The MDO process is a processing method that stretches plastic film in the machine direction to enhance its performance. This is a post-extrusion process. The MDO stretching equipment is completed by 8-12 rolls through four stages of preheating, stretching, annealing, and cooling. The MDO treatment can effectively control the stretching rate of the film in the machine direction, so that the film has better tensile properties, dimensional stability and surface flatness in the machine direction. This film usually has high strength, stiffness and wear resistance, so it is widely used in various industries.

The global High-density MDO-PE Film market size was estimated at USD 335 million in 2023 and is projected to reach USD 715.66 million by 2032, exhibiting a CAGR of 8.80% during the forecast period.
