Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-Density Polyethylene Geocell competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High-Density Polyethylene Geocell (HDPE Geocell) is a three-dimensional cellular geosynthetic material made from high-density polyethylene strips that are thermally or ultrasonically bonded to form a honeycomb-like structure. When expanded and filled with materials such as soil, gravel, sand, or concrete, the geocell forms a stable confinement system that significantly enhances the load distribution, erosion resistance, and structural stability of the ground. HDPE geocells function by limiting lateral movement of infill materials, thereby improving shear strength, preventing soil erosion, and enhancing bearing capacity. They are known for their high tensile strength, chemical resistance, UV stability, and flexibility, making them suitable for a wide range of geotechnical applications.

The global High-Density Polyethylene Geocell market size was estimated at USD 617.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
