Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-Density Tungsten Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global High-Density Tungsten Powder production reached approximately 10110 tons with an average global market price of around US\$ 180 per kg, a single-line production capacity of approximately 1,500 ton/year, and a gross profit margin of approximately 10%-20%. High-Density Tungsten Powder is a fine metallic powder composed primarily of tungsten (W) particles characterized by an exceptionally high density, typically exceeding 19 g/cm³. It is produced through hydrogen reduction of tungsten oxides or other chemical processes that ensure high purity, uniform particle size, and excellent flowability. Due to its high melting point (over 3400 °C), excellent radiation shielding, high strength, and good wear resistance, high-density tungsten powder serves as a key raw material in the powder metallurgy industry. It is used to manufacture tungsten heavy alloys, penetrators, counterweights, radiation shields, electrical contacts, and thermal management components. Upstream mainly involves the mining and refining of tungsten ores (such as scheelite and wolframite), followed by chemical processing to produce high-purity tungsten oxides and intermediate compounds. The midstream stage focuses on powder production, including hydrogen reduction, granulation, and particle size control to achieve high density and purity. Downstream applications encompass the manufacturing of tungsten heavy alloys, radiation shielding materials, electrical contacts, counterweights, and aerospace components, where the superior density, hardness, and thermal stability of tungsten powder are utilized. This integrated value chain supports industries such as aerospace, defense, medical, and electronics, driving continuous technological improvement and material innovation.

The global High-Density Tungsten Powder market size was estimated at USD 1821.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
