Report Overview

Laser technology is widely used in the military field. According to the laser output power, it can be divided into low-energy laser weapons and high-energy laser weapons. Low-energy laser weapons use weak laser lasers as the core, such as laser ranging and laser guidance, etc. are low-energy laser weapons. High-energy laser weapons use powerful lasers as the core, and use lasers as energy to damage or disable targets. High-energy laser weapons use the high energy density characteristics of lasers to ablate the irradiated target, thereby achieving damage or defunctionalization of the irradiated target. At present, it is generally believed that the average output power ≥ 20 kilowatts is called a high-energy laser weapon.

The global High Energy Laser Weapons market size was estimated at USD 5730 million in 2023 and is projected to reach USD 11550.10 million by 2032, exhibiting a CAGR of 8.10% during the forecast period.
