Report Overview

High fiber feeds are specialized animal nutrition products formulated with elevated levels of dietary fiber, primarily sourced from ingredients like forages, beet pulp, soybean hulls, and bran. These feeds are designed to support digestive health, weight management, and metabolic functions in livestock, particularly ruminants (e.g., cattle, sheep) and horses, as well as in monogastric animals (e.g., pigs, poultry) when balanced with other nutrients. The high fiber content aids in promoting gut motility, preventing digestive disorders, and optimizing feed efficiency, making them essential for animals with specific dietary needs, such as those in lactation, gestation, or recovery. The market for these feeds is driven by the increasing focus on animal health, sustainable farming practices, and the demand for natural, functional feed alternatives to antibiotics and synthetic additives.

The global High Fiber Feeds market size was estimated at USD 350.64 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
