Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Flatness Silicon Wafer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ultra-flat silicon wafers (TTV less than 1 micron) are silicon wafers that meet high-precision requirements in semiconductor manufacturing. They have extremely low thickness uniformity (TTV) and are typically used in high-performance chips, advanced packaging, and high-reliability electronic devices. Their production relies on precision processes such as chemical mechanical polishing (CMP). In 2024, the global ultra-flat silicon wafer market will be worth approximately US\$500-600 million, mainly driven by 5G communications, artificial intelligence chips, high-performance computing and other fields. North America and Asia (especially China) are key markets. Leading manufacturers such as Shin-Etsu Chemical and SUMCO have consolidated their market share through technological iterations (such as nano-level polishing processes), while Chinese manufacturers (such as Shanghai Silicon Industry) have gradually increased their market penetration by accelerating domestic substitution and policy support (such as "Made in China 2025"). The compound growth rate is expected to remain at 8%-10% in the next three years.

The global High Flatness Silicon Wafer market size was estimated at USD 103.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
