Report Overview:

Magnetics High Flux cores are distributed air gap cores made from a 50% Nickel and 50% Iron alloy powder for the highest available biasing capability of any powder core material. It is a powder alloy material with the highest magnetic Flux among all magnetic materials, also known as High Flux magnetic powder core. The relative permeability is about (14~160), and the saturation flux density is about 1.5T. Ferro-nickel magnetic powder core has excellent DC bias capability, high saturation magnetic flux density and low core loss and high energy storage characteristics. High Flux magnetic cores have many advantages in applications with High power, High DC bias and High AC. The saturated flux density of high-flux alloy is twice that of MPP alloy and more than three times that of ferrite. High Flux magnetic powder cores provide higher DC bias current and AC Flux density. Compared with iron powder core, HighFlux magnetic powder core has lower loss and higher DC bias capability. The magnetic loss of High Flux magnetic powder cores is lower than that of XFlux(ferro-silicon alloy) magnetic powder cores with equal bias capacity. In general, inductors using High Flux magnetic cores are much smaller in size than inductors using MPP, iron cores and ferrites.

The Global High Flux Magnetics Powder Core Market Size was estimated at USD 108.94 million in 2023 and is projected to reach USD 124.86 million by 2029, exhibiting a CAGR of 2.30% during the forecast period.
