Abstracts

High-frequency coaxial cables are specialized cables designed to transmit electrical signals at high frequencies with minimal loss and interference. They consist of a central conductor, usually made of copper or aluminum, surrounded by an insulating material, known as dielectric, which is further encased in an outer conductor or shield. The shield prevents external electromagnetic interference from affecting the signal transmission and also helps contain the electromagnetic fields generated by the central conductor. They are widely used for transmitting high-frequency electrical signals, such as those used in telecommunications, cable television, internet connections, and networking applications. The global core manufacturers of High-frequency Coaxial Cables include Fujikura, Jiangsu Trigiant Technology and Prysmian. The top three companies have a market share of about 12%. China is the world's largest High-frequency Coaxial Cables market with a market share of about 54%, followed by North America and Europe with a market share of 14% and 13%, respectively. In terms of product type, Micro Coaxial Cable is the largest segment with approximately 58% market share. In terms of application, Consumer Electronics is the largest downstream segment, accounting for about 56% of the market.

The global High-frequency Coaxial Cables market size was estimated at USD 5026.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
