Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Frequency High Speed CCL competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Copper Clad Laminate (CCL) is made by impregnating the reinforcing material with resin adhesive, drying, cutting, and stacking the blank, then covering it with copper foil, using steel plate as a mold, and forming it in a hot press under high temperature and high pressure. As the main raw material for printed circuit boards, copper clad laminates are only used in the manufacture of printed circuit boards, and their terminal applications are extensive, including communications, consumer electronics, Automotives, military aviation, etc. According to the mechanical rigidity, copper clad laminates can be divided into two categories: rigid copper clad laminates and flexible copper clad laminates. Rigid copper clad laminates are copper clad laminates that are not easy to bend and have a certain hardness and toughness; flexible copper clad laminates are made of flexible reinforcing materials (films) covered with electrolytic copper foil or rolled copper foil. Their advantage is that they can be bent, which is convenient for the assembly of electrical components. According to the reinforcement materials used, commonly used rigid copper clad laminates can be divided into three categories: glass fiber cloth-based copper clad laminates, paper-based copper clad laminates and composite-based copper clad laminates. In 2024, global High Frequency High Speed CCL sales reached approximately 130,418 K Sqm, with an average global market price of around 27.7 US\$/Sqm. Production capacity reached 150,000 K Sqm, with a gross profit margin of approximately 25%. Global High Frequency High Speed CCL key players include Panasonic, Elite Material, Taiwan Union Technology Corporation, ITEQ and Kingboard Laminates, etc. Global top five manufacturers hold a share over 45%. The largest market is Asia-Pacific, has a share

about 60%, followed by North America and Europe, with around 24% and 15% market share respectively. In terms of product, High Speed CCL is the largest segment, with a share about 75%. And in terms of application, the largest application is Network Switches, has a share about 30%, followed by 5G Base Station, Servers, Automotive, Aerospace. Driven by the development of 5G, communication facilities such as base stations have maintained a certain growth. Communication PCB continues to develop in the direction of high density, high integration, high speed and high frequency, high heat dissipation, thinness, and miniaturization, and the requirements for CCL are gradually increasing. In the long run, the market demand for high-frequency and high-speed CCL will continue to increase. For different application environments, faster data transmission and computing speeds, higher heat resistance and high Tg are achieved. High-performance and environmentally friendly CCL will become the mainstream of the industry in the future.

The global High Frequency High Speed CCL market size was estimated at USD 3611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
