### Report Overview

High Frequency Link (HFL) Converters are power electronic devices that use a high-frequency transformer—typically operating between 20 kHz and 500 kHz—to isolate and transfer energy between input and output stages. These converters are designed for compact, lightweight, and high-efficiency power conversion in both AC-DC and DC-DC applications. Key features include galvanic isolation, bidirectional power flow, and modular design, supporting voltage ranges from 50V up to 1500V and power ratings from a few hundred watts to several tens of kilowatts. Their ability to reduce transformer size and improve conversion efficiency makes them essential in modern energy infrastructure, including EV chargers, solar inverters, and aerospace power systems.
